

The global electrical circuit

All living organisms generate their own electrical fields keeping us vertically polarized like the atmosphere. "Our negative feet walk on the negative ground, as our positive head points to the positive sky." Artificial, chaotic, pulsed signals disturb this balance. "Invisible Rainbow" by Arthur Firstenberg

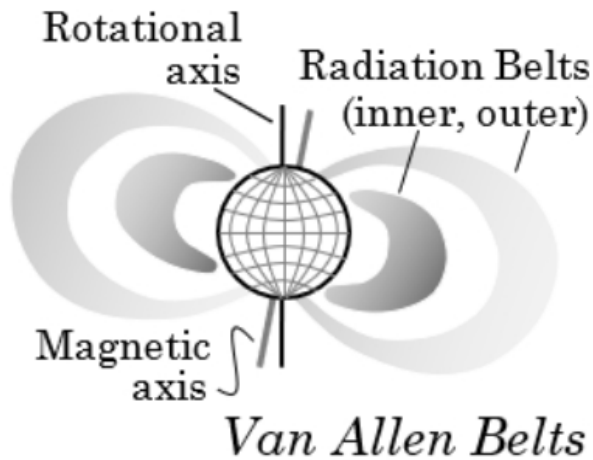

Gel:

The fourth phase of water

The exclusion zone (EZ) water is a negatively charged structured gel. Bulk water protons and EZ water behave like a battery delivering minerals and other compounds to the body. This action sends blood cells to the smallest capillary and back again to the heart. "The Forth Phase of Water" by Gerald Pollack and "The Contagion Myth" by Thomas Cowan, MD and Sally Fallon Morell

Our Invisible Electromagnetic World

Astrophysicist James Van Allen discovered layered belts of highly charged particles after a large number of military satellites were deployed in 1958. Continued disruption and attempts to modify this space remains a major concern for many scientists today.
